WHAT YOU KNOW ABOUT REHABILITATION

CAROLYN MA, PharmD AGE 50

“ Every day, I am able to celebrate a small triumph of basic function and these steps help to keep me motivated. ”

As a former triathlete, Pharmacy Practice professor and director Carolyn Ma, knows all about determination and perseverance. She was cycling on the Big Island when she was hit by a delivery truck. Her hips, tailbone, arm, leg, and ribs were broken, and her lungs were punctured.

She had to learn how to stand, walk and write again. She is now actively working on maintaining her strength and range of motion through traditional therapy and new technologies such as the Bionic Leg, which gives her the confidence to take the next step.

Renovations will incorporate the latest technology into patient rooms including medical gasses and air conditioners with special negative ionizers.

TONI CHONG, Businesswoman
Brain Aneurysm, 2011

REHABILITATION HOSPITAL
— OF THE PACIFIC —

For the past 58 years, Hawaii residents have come to Rehabilitation Hospital of the Pacific (REHAB) with challenges that changed the course of their lives. Whether they suffered major multiple trauma from a car accident or experienced a serious stroke, they have all worked with a common purpose: **to recover basic skills that give them great joy, such as taking a walk on the beach or greeting a friend.**

They deserve the best care available. REHAB has the most experienced and skilled team of rehabilitation doctors, therapists and nurses in the state, with the latest technology to stimulate your muscles to regain mobility or relearn speech. Now, we need a facility that is truly a place of healing.

It is for this reason that we are embarking on a capital campaign to renovate our facility, and we need your help. Together, we can rebuild REHAB and ensure that future generations of Hawaii residents receive the care they need to recover and thrive, right here at home.

REJUVENATE

HELPING PATIENTS LIVE INDEPENDENTLY

KURT TATEISHI AGE 50

“ Even though you are not the same, you can still live a good life. ”

At his prime, Kurt was an industrious worker who enjoyed diving, fishing and throwing pottery in his spare time. In November 2006, his life changed when he was hit in the head with a steel beam and fell 15 feet from a ladder. Suffering from brain injury, Kurt attempted to run away after being admitted to different hospitals.

Using a walker to get around, Kurt was finally introduced to REHAB where he excelled. He started painting in the Louis Vuitton Creative Arts Program and made friends who provided comfort, encouragement and support. It was the first time Kurt stopped running.

Today, Kurt stands tall and doesn't need a walker. He is proud of his independence and has even begun throwing pottery again. Sometimes he finds it hard to concentrate and is often forgetful, but Kurt is grateful to REHAB for his second chance in life.

Renovations will incorporate patient rooms for individuals recovering from brain injury with features that offer a safe and calming environment.

WE SPECIALIZE IN RESTORING BODY & BALANCE

2010 PATIENT MIX

48%

NEUROLOGIC

Spinal cord injury, traumatic brain injury, stroke and Guillain Barre.

The impact of stroke, brain and spinal cord injuries vary greatly for each person. Recovery can affect physical ability, memory and problem solving, as well as behavior and personality. Our interdisciplinary team, which includes a neuropsychologist, focuses on overcoming or adapting to physical, cognitive and behavioral challenges.

37%

COMPLICATED ORTHOPEDIC

Amputation, fracture and joint replacement.

We treat patients whose orthopedic conditions are complicated by prior neurologic problems such as compressed spinal cord, peripheral neuropathy, Parkinson's, Multiple Sclerosis, stroke and nerve injury. Amputee care focuses on post-operative recovery and complete prosthetic training.

15%

GENERAL REHABILITATION

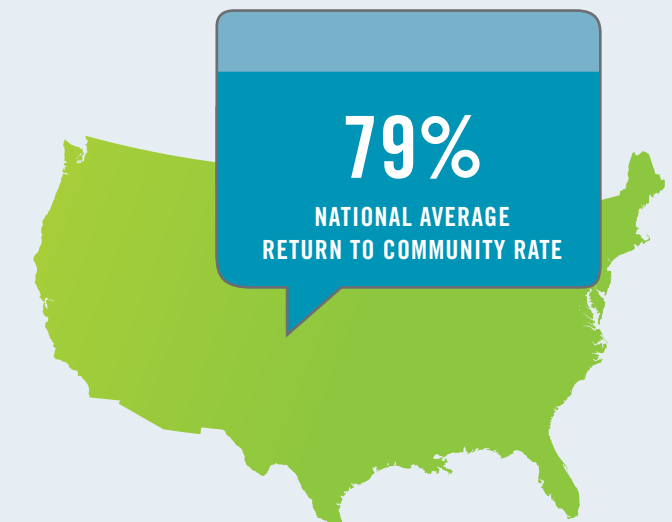

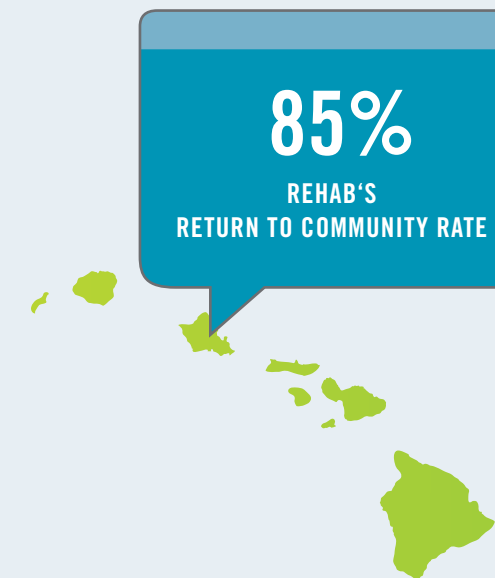

Major multiple trauma, complicated cardiovascular surgery, cancer treatment and pulmonary.

Patients who are severely weakened by lengthy hospital stays as a result of surgical or medical complications can benefit from rehabilitation before returning home. This includes patients recovering from infection, cardiac surgery or cancer treatment.

NO ONE GETS LESS THAN OUR BEST

RETURN TO COMMUNITY RATE

One measure of the **quality of rehabilitation** hospitals across the country is their ability to **return patients to the community** so that they can **live as independently** as possible. We are proud that year after year, our success rate exceeds the national average.

DAWNA ZANE AGE 29

“ I’m very grateful to be alive today, knowing how easily my life could have been taken away from me. ”

No one knows more about the power of optimism than Dawna Zane. After being thrown from a car crash at 17, she was left paralyzed from the chest down. Suddenly, her world changed and she was forced to learn everything from scratch.

REHAB’s physicians, nurses and therapists worked with Dawna so that she could be active again – wheelchair racing, swimming, driving and even skydiving. With unwavering spirit and determination, Dawna graduated from high school, college and recently received her Masters in Counseling.

Today, Dawna lives her life to the fullest and looks forward to a promising future.

Renovations will designate rooms with built-in lifts and environmental controls so that spinal cord injury patients with limited mobility can operate the phone, call button, lights and bed without assistance.

REBUILD

THE VISION FOR OUR FUTURE

WE ARE RENOVATING FOR THE FUTURE

UPGRADING OUR FACILITY WITH NEW ENHANCEMENTS

The infrastructure will be transformed to further **improve safety and comfort**.

ELECTRICAL SYSTEM will be upgraded to be in compliance with The Joint Commission, the accrediting organization for hospitals nationwide.

FIRE PREVENTION SYSTEM will be in compliance with all applicable National Fire Prevention Agency code for hospitals.

AIR CONDITIONING system will be replaced to improve air quality and comfort for patients and staff.

HURRICANE RESISTANT WINDOWS will be installed for emergency preparedness in the event of a natural disaster.

TEAM STATION

ENGAGING FAMILY & FRIENDS IN THE RECOVERY PROCESS

Renovations will incorporate features that **improve the patient experience** and encourage the **involvement of loved ones** in the healing process.

FAMILY ROOMS will include sleeper chairs so that young children and patients from the neighbor islands can keep family members close by during their stay.

TRANSITIONAL APARTMENT ROOMS will be designed and an Activities of Daily Living Center with a complete kitchen and residential bathroom will be included for patients to practice self-help skills with the aid of skilled therapists.

MORE SINGLE ROOMS will be added to provide patients with privacy as they heal.

FAMILY ACTIVITY ROOMS will be added to each patient floor where family and friends can dine together, socialize, watch movies and access the internet.

HEALING GARDEN for patients and their families to relax. A mobility track will be specifically designed for patients to practice moving across different surfaces when in wheelchairs or fitted with new prosthetics and other adaptive equipment.

FAMILY ACTIVITY ROOM

MAIN LOBBY

EXPANDING OUR PROGRAMS TO MEET EVERYONE'S NEEDS

New programs will focus on the unique challenges of patients, while keeping up with the **latest in acute rehabilitation medicine** and technology.

VISION CENTER for patients with brain injuries and neurological conditions.

SPEECH AND COMMUNICATION CENTER for patients with disorders that impact their ability to speak or swallow or impair their cognitive and expressive skills.

DRIVER'S EVALUATION AND REHABILITATION TRAINING for elderly and disabled individuals who require adaptations or special training to obtain a driver's license.

NEW CLINICAL PROGRAMS for rehabilitation from cancer treatment, cardiac surgery and pulmonary conditions.

OUR NEW HOSPITAL WILL HAVE SPECIALIZED PATIENT ROOMS

Advanced equipment will be built into rooms to **better serve those with special needs**.

LIFTS AND ENVIRONMENTAL CONTROLS will be installed in rooms that serve those with spinal cord injuries. Patients with limited mobility will be able to independently control the television, phone, nurse call button, lights and bed without assistance.

NOISE REDUCTION ROOM with specialized features that also reduce visual stimulation to create a calming environment.

INFECTION CONTROL ROOM with negative air ionizers that will reduce the spread of infection.

MEDICAL GAS AND SUCTION will be built into rooms for patients with complex conditions.

TONI CHONG AGE 58

“ The first day, they said: ‘We’ll check you in and then we’ll work you.’ And they did...it was wild! An absolutely positive experience. They are remarkable people. ”

Toni Chong understands the value of hard work. An upbeat and successful businesswoman, Toni’s life was turned upside down when she suffered from an unexplained aneurysm in January 2011.

After being unconscious for three weeks, she arrived at REHAB on a gurney, unable to speak or walk. Toni put her faith in the staff to get her better. They did not let her down. She describes the staff as being kind and patient, yet firm and demanding. Thankfully, all of her hard work paid off and Toni’s swift recovery resulted in an early discharge.

A few short months later, this amazing woman is back to stand-up paddling with her husband, Wes. Toni’s strong work ethic and positive attitude are keys to success in her recovery. Wes truly believes that she would not be where she is today if it wasn’t for REHAB.

Renovations will create new spaces to involve loved ones in the healing process, including multipurpose rooms for patients to dine with family and friends and a healing garden where patients can socialize and relax with visitors.
